DETAILED ACTION

Election/Restriction

1. Applicant's election with traverse of Group I, claims 1-11 in Paper No. 11 is acknowledged. The traversal is on the ground(s) that "the office has failed to meet the burden necessary in order to sustain the Restriction Requirement." of Groups I and III since "the Office has not provide reasons and/or examples to support" that "the product as claimed can be used in PCR or RNA synthesis." and "the Office has failed to show that the proposed use of the claimed composition in 'PCR or RNA synthesis.' is materially different from the claimed use.".

The above arguments have been fully considered and have not been found persuasive toward the withdrawal of the restriction requirement nor persuasive toward the relaxation of same such that Groups I and III will be examined together. First, although, in previous office action, the examiner did not provide an example to support his position. However, the use of dye-labeled dNTP in PCR are well known in the art. For example, see column 15 of US Patent No. 5,942,422. Second, although, in previous office action, the examiner did not give detailed explanation why the proposed use of the claimed composition in 'PCR or RNA synthesis.' was materially different from the claimed use, since claimed method in Group I was directed to a method for sequencing nucleic acid, it would have been obvious to one having ordinary skill in the art at the time the invention was made to understand that the claimed method was different from a method for PCR because these methods had different method steps and different purposes for use.

The requirement is still deemed proper and is therefore made FINAL.

Art Unit: 1634

2. After reviewing amended claims 1-11, Group I contains claims directed to the following patentably distinct species of the claimed invention:

(1) nucleotide sequencing in the presence of an immobilized nucleic acid template and a primer solution (claims 1-11)

(2) nucleotide sequencing in the presence of an immobilized primer and a nucleic acid template solution (1-11)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, generic claims are claims 1-11.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1634

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

3. Group I contains claims directed to the following patentably distinct species of the claimed invention:

(1) DNA polymerase and dNTP (claims 1-8, 10, and 11).

(2) RNA polymerase and NTP (claims 1-7 and 9-11)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, generic claims 1-7, 10, and 11.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1.
